

Educational Technology & Mobile Learning

This is one of my favorite websites for learning about technology content and how to apply it in the classroom.

This website has a lot of content. Because it is so multi-faceted, I decided to give it its own focus.

<http://www.educatorstechnology.com/>

I have found this website to be an invaluable tool when I want to learn about new digital applications.

There is a subscription feature you can use to keep you up-to-date. The subscription sends you daily emails targeting the content for the day. If the content happens to be something you are interested in, then you can click on the link and get additional information.

I also find this website handy when I need an app or website for a certain concept. I just put in a few keywords in the search box and it always makes an excellent suggestion or reminds me of an app or website that I forgot about.

I would suggest using the subscription feature. You can delete the email if you are not interested in the content for that day. And no I do not work for them.

Website Spotlight

Kiddle – www.kiddle.co

Kiddle was designed by Google for younger users. It contains pre-filtered content that's more understandable and relatable for children.

It still allows you to do the same search options Web, Images, News, and Videos, but once you start searching you will notice different content. It also will not allow swear words, however I did not test this at work.

An Awesome App

Virtual Manipulatives for abcya.com

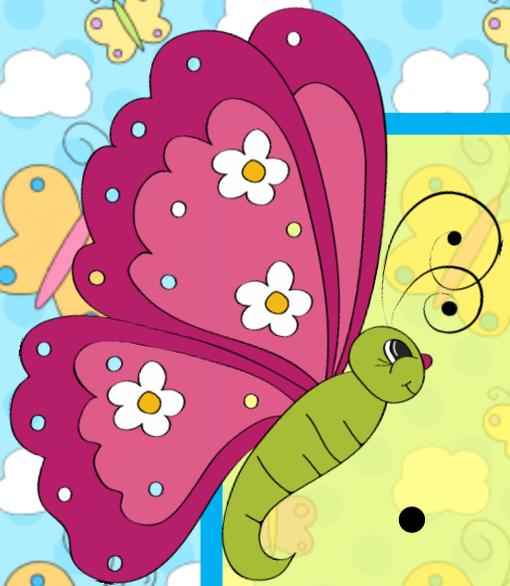

Virtual Manipulatives from abcya.com has nearly a half million installs.

It is also on the list of the top 50 FREE Educational Apps.

Customizable fractions, decimals, and percentages can be created. There is also a feature that allows annotation. Screens can be saved for grading later or a picture can be taken so content created in the application can be used elsewhere.
